(54) Title: **HANDHELD NETWORK CONNECTION CREATED WITH STORAGE MEDIA IN A POCKET FORMAT**

(57) Abstract: The invention relates to a handheld network connection and a method therefore, created with at least two storage media (24, 26, 28) in pocket format, with software for communication of data packets between at least two networks (10, 12, 14) access blockages of the type of at least one of a firewall (20), socks, IP-filter and proxy. Each of the storage media (24, 26, 28) having an interface to a host computer (29) in the networks (10, 12, 14), and which through software establishes communication with the host computer (29) within the networks (10, 12, 14) by utilizing the host computers (29) temporary catalogues, which provides access to the host computer (29) without disturbing its file structure. A crypto-daemon according to the invention comprises a connecting methodic testing to establish a tunneling (32) to an external central server (30) regarding the type of the allowable data packets for communication towards the existing type of access blockage, the crypto-daemon

WO 2005/015879 A1

establishing the tunneling towards the external central server (30) passing the access blockage. Through the invention, an external network is established through the external central server (30) outside the networks for simultaneous communication through at least two storage media (24, 26, 28) and their software, the tunneling (32) through the access blockage being provided without trespassing the networks (10, 12, 14) per se, conveying towards the access blockage unrestricted capacity for the communication of data packets.

For two-letter codes and other abbreviations, refer to the "Guidance Notes on Codes and Abbreviations" appearing at the beginning of each regular issue of the PCT Gazette.
